                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                      "Norvalyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                      Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;

                                                                                                                                                                                                                       hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha'stchoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A

The peptides of the invention are alpha-ketcamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Norvalyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;
                                                                                                                                                                                                                                                                                                  Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence represents a peptide compound of the invention having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                       ö
                                                                                                    hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketcamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus.
                                                                                                                                                                                                                                                                                                                                                                                                                            "Norvalyl carbonyl forming keto-amide linkage with residue 7\,\mathrm{m}
                                                                                                                                                                                                    Gaps

                                                                                                                                                            The sequence represents a peptide compound of the invention having hepatitis ("HV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat discorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                forming keto-amide linkage with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of invention are alpha-ketoamide peptide analogues. The peptides have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;
Novel peptide compound having hepatitis {\tt C} virus protease inhibitory activity useful for treating disorders associated with hepatitis {\tt C}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-228-986-73

Sequence 73. Application US/09228986

Patent No. 6359198

GENERAL INFORMATION:

APPLICANT: Strabala, Timothy

APPLICANT: Strabala, Timothy

TITLE OF INVENTION: Compositions Isolated from Plant Cells

TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling

TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling

TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling

CURRENT FILING DATE: 1999-01-12

NUMBER OF SEQ ID NOS: 130

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 73

LENGTH: 947

; TYPE: PRT ; ORGANISM: Pinus radiata US-09-228-986-73

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 66, Application US/09947387

Patent No. US20020150885A1

GENERAL INFORMATION:

APPLICANT: Reana, John F.W.

APPLICANT: Reana, John F.W.

APPLICANT: Zhang, Han-Zhong

TITLE OF INVENTION: No. US20020150885A1e1 Fluorogenic or Fluorescent Reporter Mol

TITLE OF INVENTION: Screening Assays for Caspases and Other Enzymes and the

TITLE OF INVENTION: Use Thereof

CURRENT APPLICATION NUMBER: US/09/947,387

CURRENT FILIS DATE: 2001-09-07

 phosphate + L-glutamate + carbamoyl phosphate.
--- COFACTOR: Binds three manganese ions (By similarity).
--- PATHWAY: Arginine biosynthesis.
--- PATHWAY: Pyrimidine biosynthesis, first step.
--- SUBUNIT: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

         BIOCHEMISTRY 31:3907-3917(1992).

-I FUNCTION: THIS PROTEIN SPECIFICALLY BINDS TO THE DNA SEQUENCE
5'-GGGACTTTCC-3' WHICH IS FOUND IN THE ENHANCER ELEMENTS OF
NUMBROUS VIRAL PROMOTERS SUCH AS THOSE OF SY40, CWY, OR HIVI.
IN ADDITION, RELAFED SEQUENCES ARE FOUND IN THE ENHANCER ELEMENTS
OF A NUMBER OF CELLULAR PROMOTERS, INCLUDING THOSE OF THE CLASS I
MHC, INTERLEUGIN-2 RECEPPOR, AND INTERFERON-BETA GENES. IT MAY ACT
IN T-CELL ACTIVATION.
                                                                                                                             -!- SUBCELLULAR LOCATION: Nuclear.
-!- INDUCTION: BY MITOGEN AND PHORBOL ESTER.
-!- DOMAIN: CONTAINS TWO SETS OF 2 ZINC-FINGERS, WHICH ARE WIDELY SEPARATED AND RECOGNIET THE SAME DNA SEQUENCE. THERE IS A FIFTH ZINC-FINGER IN-BETWEEN.
-!- SIMILARITY: STRONG, TO HIVEP2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                     -i- SUBCELLULAR LOCATION: Integral membrane protein.
-i- INDUCTION: Highly expressed, but only in cells subject to sulfur limitation, and it is turned on by the positive-acting Cys-3 sulfur regulatory protein.
-i- MISCELLANEOUS: SULFATE PERMEASE II IS MAINLY FOUND IN MYCELIA.
-i- SIMILARITY: BELONGS TO THE SLC26A FAMILY OF TRANSPORTERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The complete sequences of 100 new cDNA clones from brain which can
code for large proteins in vitro.";
DNA Res. 5:13-99(1998)
L. CATALYITC ACTIVITY: ATP + H(2)O = ADP + phosphate.
IL CATALYITC ACTIVITY: ATP + H(2)O = ADP + phosphate.
TISSUE SPECIFICITY: Wide expression, with highest levels in
Kidney, followed by lung, brain, prostate, testis, ovary, and
small intestine.
C. INGERSE: Defects in ATP10C may be a cause of Angelman syndrome
(AS), also known as 'happy puppet syndrome'.
C. SIMILARITY: BELONGS TO THE CATION TRANSPORT ATPASES FAMILY (E1-E2
APPASES). SUBSPANILY IV.
                                                                                                                                                                                                                             "A novel maternally expressed gene, ATP10C, encodes a putative aminophospholipid translocase associated with Angelman syndrome."; Nat. Genet. 28:19-20(2001).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BETA1-BP. TGF-BETA1-BP DOES NOT BIND DIRECTLY TO ACTIVE TGF-BETA1.
-!- ALTERNATIVE PRODICTS: 2 isoforms; a short form (shown here) and a long form (AC Q14766); are produced by alternative splicing.
-!- PTM: CONTAINS HYDOXYLATED ASPARAGINE RESIDUES.
-!- PTM: The N-terminus is blocked.
-!- SIMILARITY: CONTAINS 16 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Kanzaki T., Olofsson A., Moren A., Wernstedt C., Hellman U.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nature 406:477-483(2000).

-!- FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS SUBSTRATES (By similarity).

-!- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-JUN-2002 (Rel. 41, Created)

"TGF-beta 1 binding protein: a component of the large latent complex of TGF-beta 1 with multiple repeat sequences.";

Cell 61:1051-1061(1990).

COMPOSED OF THE TGF-BETA1 MOLECULE NONCOVALENTLY ASSOCIATED WITH A DISULFIDE-BONDED COMPLEX OF A DIMER OF THE N-TERMINAL PROPEPTIDE OF THE TGF-BETA1 PRECURSOR AND A THIRD COMPONENT DENOTED TGF-BETA1-BP. TGF-BETA1 BD DOES NOT BIND DIRECTLY TO ACTIVE TGF-BETA1.

COMPOSED OF THE TGF-BETA1 PRECURSOR AND A SHIDD DIRECTLY TO ACTIVE TGF-BETA1.

COMPOSED OF THE TGF-BETA1 PRECURSOR AND A SHIDD DIRECTLY TO ACTIVE TGF-BETA1.

COMPOSED OF THE TGF-BETA1 PRECURSOR AND A SHIDD DIRECTLY TO ACTIVE TGF-BETA1.

COMPOSED OF THE TGF-BETA1 PRECURSOR AND A SHIDD DIRECTLY TO ACTIVE TGF-BETA1.

COMPOSED OF THE TGF-BETA1 PRECURSOR AND A SHIDD DIRECTLY TO ACTIVE TGF-BETA1.

Latent transforming growth factor beta binding protein 1L precursor
(Transforming growth factor beta-1 binding protein 1) (TGF-betal-BP-
ENZYME WHICH IS COMPOSED OF 2 ALPHA CHAINS, 1 BETA CHAIN, AND 1 BETA' CHAIN (By similarity).
SIMILARITY: BELONGS TO THE RNA POLYMERASE BETA' CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens (Human),
